DETAILED ACTION

Drawings

Figures 1-4b should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2 and 9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 2 and 9 state the limitation "wherein the discontinuities comprise any of starting-, end- and turning-point portions of the adhesive pattern". However, the claim states that the device is to be free of such discontinuities. Therefore, the discontinuities may not exist in the device at all as such discontinuities are not distinctly claimed. Therefore it is improper to further limit a feature which is not positively claimed. For examination purposes, Examiner assumes such discontinuities may be non-existent.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 6-9, 11, and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by US 5,019,944 granted to Ishii et al (hereafter Ishii).

Ishii discloses a circuit-board comprising a carrier member (1), a first component (5) and a second component (6) adjacent to and spaced apart from the first, the two components being secured to the carrier member by means of an adhesive (4), wherein the adhesive is configured as a pattern on the carrier member and no discontinuities in the pattern are located within a footprint of the two components on the carrier member in an area of adjacency of the two components [claims 1, 2, 8, 9], wherein there are no discontinuities in the pattern of the adhesive within any part of said footprint [claims 6, 11], wherein the first and second components are each either a substrate or an electronic component [claims 7, 12].

Allowable Subject Matter

Claims 3-5 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

Claims 3 and 10 state the limitation "said adhesive being configured in said area of adjacency as substantially straight lines substantially transverse to a direction of said transition". This limitation, in conjunction with the other claimed limitations was neither found to be disclosed in, nor suggested by the prior art.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
